Did You Know?

The Somerset Levels are a unique wetland habitat in the southwest of England. They were formed by rivers overflowing into low-lying land, creating marshes and floodplains. Over time, humans have developed this land into a managed wetland. It is now home to a variety of animals and plants, including birds, insects and otters. The environment changes seasonally, providing a perfect opportunity for wildlife to thrive.

Number Challenge

A birdwatcher counted three fifths of all the birds in an area of the Somerset Levels.

If she saw a total of 120 birds, how many birds did she have left to count?

Critical Thinking

Is it sometimes, always or never OK to drain a wetland area of its water so that it can be turned into farmland?
