

Morning Starters: Summer 2 - Brilliant Brain

Word Challenge

Create a ladder of brain-themed words, where the last letter of the word below is the first letter of the word above.

Example:

sensory

neurons

brain

Grammar Challenge

Click text to edit 

Rewrite the sentence below, adding a 'where the action took place' fronted adverbial.

The clever crow pecked at each puzzle piece until the challenge was solved.

Example: Perched on a gnarled branch, the clever crow pecked at each puzzle piece until the challenge was solved.

Did You Know?

Humans are intelligent, but crows might be worthy rivals. These remarkable birds can solve complex puzzles and craft tools to access hidden treats. With the ability to reason, learn from experience and adapt to new situations, crows rank among the most intelligent creatures in the animal kingdom.

Number Challenge

Fact: A crow's brain has 43 times more neurons than an orangutan's.

Did you know?

43 is a prime number – a number with exactly two factors: 1 and itself.

List some different 2-digit prime numbers.

Critical Thinking

"Crows are not as smart as humans because they don't speak."

Do you agree with this statement? Why? Why not?
