Create a sentence by rearranging the words below:

Earth The orbits creating the seasons the Sun on a axis tilted.

Help: Start with the word 'The' and end with the word 'seasons'.

Did You Know?

Seasons occur because Earth's axis is tilted as it orbits the Sun. During winter in the Northern Hemisphere, the axis is tilted away from the Sun, causing sunlight to strike at a lower angle. This results in the sunlight being more spread out, leading to cooler temperatures and shorter days. Meanwhile, in the Southern Hemisphere, the Earth is tilted toward the Sun, so sunlight hits more directly, bringing warmer temperatures and longer day – marking summer in that region.
