Rewrite the sentence below with an alternative relative clause to the one underlined.

Jules Verne, who is widely regarded as the father of science fiction, was a French novelist, poet and playwright.

Did You Know?

Over 100 years before Neil Armstrong and Buzz Aldrin became the first humans to walk on the Moon, a Victorian writer named Jules Verne predicted such a journey! Incredibly, Verne imagined rocket travel long before the motor car had even been invented. His story, *From the Earth to the Moon*, sparked curiosity about space and inspired generations to dream of achieving the impossible.

Number Challenge

Fact: The Moon takes 27 days to orbit the Earth and 27 days to rotate once on its axis.

The number 27 is special because it is three times the sum of its digits:

$$27 = 3 \times (2 + 7)$$

Find some two-digit numbers that are seven times the sum of their digits.

Critical Thinking

How do you think space travel will develop over the next 100 years?
