Rewrite the sentence below, adding the important possessive apostrophes.

The infrared cameras footage revealed the lions stealthy movements as they hunted in the dark.

Did You Know?

Observing wildlife at night is easiest with infrared light, which is invisible to both animals and humans but detectable by special cameras. This remarkable technology enables film crews to capture rare footage, such as lions hunting in complete darkness. Without disturbing natural behaviour, these cameras offer a glimpse into the hidden world of nocturnal creatures, revealing their secret lives beneath the stars.
